Dr. O'Keeffe,

Cummins and Voortman are writing this letter of testimonial in support of Bim & Scan's submission to the ICE Awards.

We were engaged as project architects in the tender and construction of a renovation and extension project of a protected structure at 63 Wellington Road, Ballsbridge, Dublin 4.

It is worthwhile to note that this project was awarded "Best small project of the Year" at the Graphisoft Awards 2018 session in the London earlier this year. Whilst this award was awarded to us architects, we believe that we would not have achieved a similar outcome without the expertise of the main contractor (OS Construction) and all the consultants who did participate, including Bim & Scan with their AutoCorr software.

During one of the key stages of the project there was a requirement to assess the accuracy of the installed steel structure prior to the manufacturing of the structural glazing elements. The AutoCorr service permitted an automated assessment and reporting of the position of the installed steel versus the position of the steel as modelled in BIM.

This capability at this critical juncture has given the design team extra assurance during this project and we can therefore highly recommend this software to fellow construction professionals. We understand that we may not have used the full capability of the software on this project, but that we are now looking to integrate this automated verification / correction technology into the workflow of larger architectural projects.

We enclose a number of images of the process involved (to the right) and should you have any further queries please don't hesitate to get in touch with us,

Kind regards,

Bernard Voortman, MRIAI, Dip. Arch (BE), M(sc) Urban Design
Director & Senior Chartered Architect
